This course explores the early history of Africa and Africa's place in the world from the beginnings of human evolution to the high point of Africa's medieval empires in the fifteenth century. It introduces students to the multiple disciplines contributing to knowledge about early Africa, develops skills in internet research, and shows the centrality of Africa and Africans for humanity in general.

The four modules of the course address human evolution, language in history, archaeology of Neolithic and iron-age settlements, and medieval empires. For each module there will be lectures, an assigned book, internet lab sessions, preparation of a two-page paper, discussion (of the lectures, readings, and papers), and an in-class exam. Each student paper will summarize topics selected from a list of key subjects. Research for the papers will rely on internet resources, assisted in lab sessions. Papers will be posted on the web, and the exam for each module will be based on the papers as well as on readings and lectures.

Texts:

- C. Stringer and R. McKie, African Exodus : The Origins Of Modern Humanity
- B. Heine and D. Nurse, African Languages: An Introduction
- Graham Connah, African Civilizations
- D. T. Niane, Sundiata, an Epic of Old Mali

Course Grade:
